in Europe and USSR and the German Kasernierte
Volkspolizei

NO. OF PAGES 33

PLACE
ACQUIREDNO. OF ENCLS.
(LISTED BELOW)DATE OF
INFO.SUPPLEMENT TO
REPORT NO.THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE
OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT OF
U.S.C. 51 AND 52 AS AMENDED. ITS TRANSMISSION OR THE REVELATION
OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON OR FOR
PUBLICATION BY ANY SOURCE OF THIS AGONY IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

Information obtained in March 1954 revealed no changes in the strength, organization, armament and quartering of Soviet Army units. The training program was continued with the previous intensity; there were no indications, however, that the present training standard exceeded that observed during the same time last year. Winter training in the Soviet Zone of Germany terminated with exercises by reinforced divisions, which started in late February and lasted up to the last days in March. It can be expected that the bulk of the Soviet combat divisions will transfer to the summer training grounds still in the first half of April.

GERMANYOrder of Battle.

1. Between 1 and 31 March 1954, no changes regarding the general OB picture including the quartering of units were discernible. Numerous units were again confirmed by observations made at the posts. See Annex 1.

Training.

2. Training of Soviet Army units in March was concentrated on exercises in open terrain and combat firing at the troop training grounds. According to the training program, exercises outside the training grounds were started in all army areas in mid-February. However, the exercises were conducted at reinforced regimental level. Numerous exercises at division level started not before late February, with some of the exercises being continued up to the end of the period covered by the report. The combat divisions were reinforced exclusively by elements of the respective corps and army troops, except in some cases where they were also reinforced by units of the IV Arty Corps. The exercises usually lasted four to seven days, including the time for the movement to and from the training grounds. The two rifle armies are believed to have conducted these exercises at corps level. The divisions of the mechanized armies started their exercises at staggered dates, all divisions of the Third Gdr Mech Army training in the same area. As in the spring of 1953, the units of the Second Gdr Mech

- 2 -

Army were not transferred to exercises outside their billeting areas; they trained at up to regimental level in the vicinity of their posts.

Concordant observations at the posts during the period of the exercises as well as information on the number and character of troop shipments indicated that, in each case, only about 50 percent of the unit was transferred. As these elements are believed to have included predominantly trained personnel, it is assumed that, similar to practices in February 1953, the main purpose of these exercises was the training of officer and NCO personnel. Strict security measures at loading and unloading stations and, in some instances, also at transit stations and in the training areas as well as large-scale camouflage of motor vehicle and tank turret numbers made it difficult to obtain details on the exercises. It could be inferred from individual information, however, that probably in all cases the exercises involved an enemy group against which main contingents, upon arrival in a large detraining area, advanced toward on several march roads. Since individual troop movements by road and rail and march phases in the army areas often coincided, it was impossible always to obtain a clear picture of the course of the exercises. The following are details on the movements of the individual units as far as these have become known up to 1 April:

a. Eighth Gds Army Area

Conclusions as to large-scale exercises in Thuringia could be drawn only from information on individual posts and troop shipments. Observations indicated that large exercises were conducted in the OHRDRUF-GOTHA-KINDEL area by units of the XXVIII Gds Mtz Rifle Corps from about 1 to 6 March and after mid-March, and by units of the XXIX Gds Mtz Rifle Corps from about 7 to 12 March. Each time, strong contingents of the army artillery brigades from ALTENBURG participated in the exercises.

b. Third Shock Army Area

In this army area, as in Thuringia, units practiced at corps level. Elements of the two divisions of the LXXIX Mtz Rifle Corps, including the army troops from MAGDEBURG, assembled in the STENDAL-GARDELEGEN training area of the corps from 9 to 12 March. Major elements of the 94th Gds Mtz Rifle Div, corps and army troops transferred from their billeting areas to the NEUBRANDENBURG-GRANSEE-NEURUFFIN area from 15 to 17 March, from where they started march movements toward the south and southwest as far as the FRITZWALK-KYRITZ line. Return movements from this area by road and rail started after 21 March.

c. First Gds Mech Army Area

From mid-February up to mid-March, individual minor troop movements were observed from the troop training grounds of ZEITHAIN and KOENIGSERUECK to the area north of ZEITHAIN, FALKENBERG-HERZBERG and the ZEITHAIN-ORTSTRAND area. They may have been in conjunction with exercises as were observed in other army areas. No details could be learned on movements in this area and the identity of units involved.

d. Second Gds Mech Army Area

The combat divisions of this army did not transfer from their billeting areas to special training grounds for large-scale exercises but practiced in the vicinity of their posts, as they did during the preceding years.

SECRET/CONTROL - U.S. OFFICIALS ONLY

25X1

SECRET/CONTROL - U.S. OFFICIALS ONLY

- 3 -

They continued advanced combat firing and several-day exercises which they had started in February. Units practicing outside their areas included tank elements of the 1st Mech Div, which practiced firing in NEUGLIENICKE near NEURUPPIN and in the NEUSTRELITZ area, and units of the 9th Gds Tank Div, which frequently engaged in combat firing in the area of HEMMELFORD.

Third Gds Mech Army Area

The exercises of this army area were conducted in the BRAND-JUETERBOG area. The four divisions of the army moved to this area successively, troops being shipped to BRAND and returning to their posts from JUETERBOG. This indicates an east-west course of the maneuver. The following individual exercises were determined on the basis of shipping movements: by the 14th Gds Mech Div and elements of army troops and the 6th and 34th Arty Divs (US), from 25 February up to about 3 March; by the 6th Gds Tank Div, from 7 to 11 March; by the 9th Mech Div, from 15 (?) to 18 March; and by the 7th Gds Tank Div, from 16 to 20 March. It is possible that an enemy group was detached to the area east of JUETERBOG, each time by a different division.

Fourth Gds Mech Army Area

The Fourth Gds Mech Army, like the Third Gds Mech Army, practiced in the KIROU-NEURUPPIN area. The movements, made from north to south, involved the 25th Tank Div from 6 to 10 March and the 6th Gds Mech Div from 24 to 29 March. The enemy group, which was usually represented by a unit of the other division, was in position north of NEURUPPIN. Heavy elements of the 7th Gds Mech Div and components of the 32d AAA Div (US) from FRANKFURT/Oder and KUESTRIN were assembled north of COTTBUS on 15 and 16 March. They subsequently advanced toward an enemy group which, having its front oriented toward the south, was in position on either side of BEESKOW. These movements terminated south of the FUERSTENWALDE-FRANKFURT/Oder railroad line on 21 March.

3. In addition to the abovementioned exercises by the combat divisions, combat firing practices by all kinds of artillery units continued at troop training grounds. The following details became known:

a. ALTENGRABOW Troop Training Grounds

Combat firing of the brigades of the 34th Arty Div (US) started on 1 February and terminated on 9 March. * Artillery units transferred to ALTENGRABOW on 19 February returned on 22 February. Another group of units still practiced firing between 28 February and 9 March. Elements of the 6th Arty Div from RATHENOW were not at ALTENGRABOW during the period under review. Howitzer, mortar, rocket launcher and AT artillery units of the 1st Mech Div engaged in combat firing at ALTENGRABOW from 24 to 28 February, having moved to the training grounds in four shipments. Information from the troop training grounds indicated that daily combat firing by artillery, AAA and rocket launchers was continued during the first half of March. The troops involved could not be identified.

b. KOENIGSBRUECK Troop Training Grounds

As during the preceding years, component units of the 6th Gds AAA Div (US) from CHEMNITZ besides units of the First Gds Mech Army conducted combat firing at KOENIGSBRUECK. Furthermore, AAA units of the following units of

25X1

SECRET/CONTROL - U.S. OFFICIALS ONLY

- 4 -

25X1

the Eighth Gds Army were identified at KOENIGSERUECK in February and in the first half of March:

Of the 21st Gds Mech Div from HALLE, up to 22 February;
 Of the 13th AAA Div from WEIMAR, up to 23 February and from 26 February to 7 March;
 Of the 935th AAA Bn (US) of the 39th Gds Mtz Rifle Div from OHRDRUF, from 25 February up to 6 March;
 Of the 932d AAA Bn (US) of the 57th Gds Mtz Rifle Div from WEISSENFELS, after 27 February.

For details on combat firing of units of the First Gds Mech Army, see Annex 2.

c. JUETERBOG Troop Training Grounds

Artillery units of the Second and Fourth Gds Mech Armies continued combat firing in the northeastern sector of JUETERBOG troop training grounds. The following units were identified:

Of the Second Gds Mech Army:

elements of the 9th Gds Tank Div, from 8 to 12 March (2 shipments);
 elements of the 12th Gds Tank Div, from 16 to 20 March (2 shipments from NEURUPPIN, 1 shipment from FUERSTENBERG).

Of the Fourth Gds Mech Army:

elements of the 120th (?) AAA Regt of the 6th Gds Mech Div, from 5 to 11 March (2 shipments);
 unidentified units of the army from ORANIENBURG and FUERSTENWALDE, after 21 March (1 shipment each).

d. Southern Sector of LETZLING HEATH Troop Training Grounds

Tank units of the 7th Gds Tank Div resumed combat firing in the southern sector of the training grounds in mid-February and remained there up to early March. For the first time this year, tank details of the 10th Gds Tank Div moved from SATZKORN to HILLERSLEBEN in two shipments on 15 March. Return movements were first observed on 22 March. Other units engaged in combat firing included:

tank units of the 6th Gds Mech Div from EBERSWALDE, from 5 to 12 March (2 shipments);
 tank units of the 25th Tank Div from ITZENLAU, after 18 March (1 shipment);
 tank detail of the 20th Gds Mech Div from ZETZ, after 15 March (1 shipment).

Last year, tank details of the Eighth Gds Army started combat firing practice at LETZLING HEATH already in late February. It is therefore possible that individual details had already completed firing practice at LETZLING HEATH during the first half of March.

e. WUSTROW Troop Training Grounds

Firing practice by AAA units with live ammunition at WUSTROW was continued up to late March. According to the identification of shipments, components of the following units were at WUSTROW: *

SECRET/CONTROL - U.S. OFFICIALS ONLY

25X1

SECRET/CONTROL - U.S. OFFICIALS ONLY

- 5 -

25X1

<u>Unit</u>	<u>Time</u>	<u>Shipment</u>
<u>IV Arty Corps:</u>		
2d Gds AAA Div	from 10 to 23 February and after 23 February	1 shipment; 1 or 2 shipments from KUMMERSDORF
6th Gds AAA Div (US)	from 10 to 26 February	1 shipment from CHEMNITZ
32d AAA Div (US)	from 10 to 25 February after 27 February	3 shipments from KUESTRIN 2 shipments from FRANKFURT/ODER
<u>Eighth Gds Army:</u>		
13th AAA Div	from 10 to 26 February	1 shipment from LEIPZIG-SCHOENAU
<u>Third Shock Army:</u>		
3d Gds AAA Div	after 18 February	2 shipments from MAGDEBURG
953d AAA Bn (US) of the 207th Mtz Rifle Div	from 9 to 25 February	1 shipment from TANGERMUNDE
2511th AAA Regt (US) of the 13th Mech Div	after 8 March	1 shipment from PERLEBERG
U/1 AAA Regt of the LXXIX Mtz Rifle Corps	after 10 March	1 shipment from BURG
<u>First Gds Mech Army:</u>		
4th Gds AAA Div	from 18 February to 2 March	2 shipments from DRESDEN
<u>Second Gds Mech Army:</u>		
31st AAA Div	from 8 to 23 February after 15 March after 18 March	1 shipment from VELTEN; 1 shipment from VELTEN; 1 shipment from DOEBERITZ
12th Gds Tank Div	from 10 to 24 February	1 shipment from NEURUPPIN
<u>Third Gds Mech Army:</u>		
62d AAA Div (US)	from 10 to 22 February	2 shipments from KOCHESTEDT
<u>Fourth Gds Mech Army:</u>		
63d AAA Div (US)	from 8 to 24 February	1 or 2 shipments from FUERSTENWALDE

SECRET/CONTROL - U.S. OFFICIALS ONLY

25X1

SECRET/CONTROL - U.S. OFFICIALS ONLY

25X1

- 6 -

AAA units from airfields of the Twenty-Fourth Air Army, which arrived at WUSTROW in 1 shipment each included:

- 1 unit from STENDAL-BORSTEL, from 26 January to 22 February
- 1 unit from WERNEUCHEN, from 19 February to 3 March
- 1 unit from ELLERHOLZ, from 9 to 21 February
- 1 unit from PARCHIN, from 15 to 21 February
- 1 unit from PUEPNITZ, up to 19 February
- 1 unit from TROILLENHAGEN, up to 21 February
- 1 unit from FINSTERWALDE, after 18 February
- 1 unit from BRAND, from 6 to 12 March

The bulk of the 4th AT Arty Brig (US) of the IV Arty Corps practiced combat firing at the WUSTROW range from 24 February to 1 March. The troops transferred from Ruegen Island by road and returned by rail.

4. A comparison of observations made during the winter of 1953/1954 with those made during the same period last year does not reveal essential differences in the execution of the training program for recruits and trained personnel; although, there have been the following differences regarding the beginning of artillery and AAA firing at the troop training grounds:

	1953	1954
at ALTENGRABOW	25 January	13 January
at JUETERBOG	1 February	15 January
at WUSTROW	1 March	1 February

These observations show that, in 1954, combat firing of artillery units at ALTENGRABOW and JUETERBOG started two weeks earlier and that of AAA units at WUSTROW four weeks earlier. A comparison of the dates of the beginning of division exercises indicated that these exercises started two weeks later than in 1953. Although a comparison of the number of units involved in exercises cannot be made, it is the impression that, this spring, more combat divisions had participated than in 1953. Although the changes in the dates marking the beginning of winter training are only slight, they are nevertheless noteworthy. It is believed that, upon taking over the command of the GOFU, Army General AA.Grechko decreed these changes in the winter training program, in order to prolong artillery and AAA combat firing and, with a view to securing time for uninterrupted training at garrisons, ordered the divisions to conduct exercises not before the end of the winter training. It can be expected that the large-scale exercises terminated about 1 April and that the units will subsequently prepare for the transfer to the troop training grounds. It must be expected that the movements to the training grounds will start still before Easter. For details, see Annex 2.

Transportation

5. Apart from minor local disturbances the flow of railroad traffic was smooth during the reported period, although the Soviet Occupation Power claimed increased freight space in connection with firing practices and exercises held at unit level. Coal stocks continued to be rather low and on 16 March 1954 represented 6.5 days' requirements, stocks which would not permit major and

SECRET/CONTROL - U.S. OFFICIALS ONLY

25X1

SECRET/CONTROL - U.S. OFFICIALS ONLY

- 7 -

25X1

sustained transportation operations. Inadequate hard coal deliveries by Poland still necessitated the use of brown coal briquettes for the firing of locomotives. Railroad coal stocks available consisted of about 60 percent hard coal and 40 percent brown coal.

6. Due to seasonal reasons, rail traffic through border stations on the Oder and Neisse Rivers and the Czechoslovakian border was heavier than in the two first months of 1954. The following features of this traffic are noteworthy:
 - a. Grain imports from the USSR amounted to approximately 5,800 carloads in February 1954. This is more than a 100 percent increase over the volume of grain shipments observed in January. Grain imports in February almost reached the all-time high of July 1953.
 - b. Hard coal imports from Poland in February 1954 amounted to 536,300 tons and thus essentially increased over the volume of hard coal imports observed during the preceding month. These coal imports represent approximately 30 days' requirements for railroad operations. However, since also the East German industry, shipping and households have claims on the Polish hard coal, the imports mentioned are inadequate.
 - c. Military supply goods sent from the USSR to East Germany included considerably increased ration supply shipments and slightly increased ammunition shipments. For details see paragraph 9.
7. The onset of milder weather made possible the resumption of railroad construction work. The following construction projects were completed:
 - a. The second track on the Jueterbog-Luckenwalde railroad line. This makes the BERLIN-HALLE trunk line double-track throughout its length. However, the second track on the JUETERBOG-LUCKENWALDE line section has not yet been put into operation because some of the switches required are not yet available.
 - b. The single-track railroad bridge over the Neisse River near MUSKAU. Railroad operations over this bridge have not yet been resumed. It is believed that the bridge was reconstructed mainly for military reasons with a view to having available an additional railroad crossing over the Neisse River, which might ease the strain on the CUBEN, FORST and HORKA railroad stations in the event of an emergency or replace one of these stations in the event of destruction.
8. Efforts at forming a reserve of freight cars continued. A reserve pool of 3,500 boxcars, 4,500 gondola cars, and 2,000 flatcars is scheduled to be established. Of this total, 3,300 cars were to be available by 31 March; 8,000 cars by 30 June; and 10,000 cars by 31 August 1954. The purpose of this reserve pool is mainly economic. The cars are to be available for use at times of peak traffic, particularly during the fall months. However, these reserve cars would also be available for sudden military requirements.

SECRET/CONTROL - U.S. OFFICIALS ONLY

25X1

SECRET/CONTROL - U.S. OFFICIALS ONLY

- 8 -

Supply.

9. Information on the arrival of military supply goods from the USSR in February 1954 is commented on as follows:
 - a. Compared with the preceding months and with the month of February of the preceding years, the rate of incoming ammunition slightly increased. This is undoubtedly due to the present winter firing practices, when consumption of ammunition was possibly higher than in the preceding years.
 - b. The food ration supply increased to an unusually high level. While, during the last years, a monthly average of 60 carloads of ration supply from the USSR was considered normal, a total of 356 carloads arrived in January 1954 and of 575 carloads in February 1954. The amount of supply observed in the first third of March was as high as 480 carloads. This increase may be attributed to the fact that, due to the food crisis in the GDR, the Soviets had to decrease the amount of supply previously drawn from the GDR.
 - c. Artillery pieces, tanks and motor vehicles arrived at a small rate.
10. Military supply traffic inside the GDR remained unchanged, except for some light increase at ammunition depots, during the period of practice firing.
11. A central tank spare part depot for the KVP was established in FINOW.

Kasernierte Volkspolizei.Order of Battle

12. Although several of the KVP units have not definitely been confirmed for some time, it is believed that no changes occurred regarding the quartering of troops and the location of schools and other KVP installations. A list of quarters, believed to be up-to-date, is attached as Annex 3. This list for the first time contains installation numbers for most of the known quarters. Some of the numbers are not yet definitely determined.

Training.

13. After various reorganizations were effected last year the situation of the KVP became stable in November 1953, which had favorable effects on the training of the 7 KVP divisions. Contrary to the procedure observed in 1953, the training program was carried through strictly according to schedule. Since the beginning of March 1954, field exercises have been conducted by infantry and mechanized regiments of various units, especially of Armeegruppe Nord and probably also by the Mechanized Division Potsdam. These exercises were preceded by numerous record service practices, combat firing, practice marches and alert exercises at small scale. Although the exercises revealed shortcomings, it is worthy of note that, with regard to extent and time, the KVP training program fairly exactly corresponds with that of the Soviet troops in the GDR. It can therefore be expected that, for the first time, the KVP Command may

SECRET/CONTROL - U.S. OFFICIALS ONLY

SECRET/CONTROL - U.S. OFFICIALS ONLY

25X1

- 9 -

25X1

25X1 plan to conduct large-scale maneuvers in the late summer of 1954. Reports
indicated that the intensive
training had a favorable effect on the morale and discipline of the troops.

Organization.

14.a. Mortar battalions

25X1 independent 120-mm mortar
battalions have been in existence in HALLE and ERFURT since the fall of 1953.
The division artillery of the infantry division hitherto consisted of mixed
gun-howitzer artillery regiments and AT artillery and AAA battalions. If the
information on the existence of the abovementioned mortar battalions should
be correct, it would indicate that two regiments, namely one gun regiment and
one howitzer regiment, are to be formed from each of the mixed artillery
regiments. The howitzer regiment would then be assigned the mortar battalions.
This reorganization would remove the last essential difference between the
organization of a Soviet infantry division and that of the KVP infantry division.

b. Rocket launcher battalions

So far, rocket launchers have definitely been identified only with the KVP in Zittau, that is with the Mechanized Division DRESDEN. It has not yet been proved whether the two Mechanized Divisions EGGESIN and POTSDAM are also assigned rocket launcher battalions. It is possible that, for the time being, only one rocket launcher battalion has been established in ZITTAU and that, upon completion of its training, from this battalion will be organized further battalions. This method was employed for the activation of the mortar regiments of the mechanized divisions. It was observed that in 1952 only one mortar regiment was activated in FRANKENBERG and transferred to EGGESIN in April 1953. In the summer of 1953, this regiment had to detach elements for the activation of mortar regiments with Mechanized Divisions DRESDEN and POTSDAM. It is therefore believed that Mechanized Division EGGESIN and POTSDAM will be assigned rocket launcher battalions during this year.

Recruiting and Premilitary Training

15. The recruiting of "volunteers" which has been under way since September 1953 was intensified during the last weeks. As relatively few men actually volunteered for registration with the KVP, compulsory measures, which had temporarily been dropped, were resumed under pressure by the SED, in order to approximate the prescribed quotas. So far as possible, however, the recruits are still drafted according to their political reliability. For instance, 10 percent of the young SED and FDJ members of VEBs shall be recruited, by order of the party.
 Contrary to previous practice, basic infantry training, firing and field training have been included in the prescribed training program for all training groups of the Gesellschaft fuer Sport und Technik (Athletic and Technical Association) (GST) since January 1954. This also affects Grundeinheiten (basic units) of the GST for radio, motor sport and aviation activities etc. Previously, these units had a mere technical character. A decree by the Central Committee of the GST in November 1953 stressed the point that, already prior to service with the KVP, all GST members have to undergo basic infantry training, field training and firing practice.

AUSTRIA/HUNGARY

Order of Battle

19. For Soviet units which were again confirmed during the period under review, see Annex 1.

Organization

20. The following is the organization of the motorized rifle battalion of the 45th Gds Mech Regt of the 13th Gds Mech Div

- 3 motorized rifle companies
- 1 machine gun company
- 1 (AT artillery) battery
- 1 mortar company
- 1 signal platoon
- 1 supply platoon.

Training

21. Training activity conducted by Soviet troops at the posts during the second half of February and the first half of March, in addition to occasional drill with and without rifles, included combat firing practice, field training, entrenching practices and special training with guns, mortars, **circular targets** and telephone cables.

Annex 1 : 1. List of Troops Confirmed in the GDR and in AUSTRIA/HUNGARY.
2. Units Identified in the USSR

25X1

1954 Construction Program

16. A total of about one billion DM east has been budgeted for the 1954 military construction program. Two thirds of the sum have already been allocated. While up to late 1953 construction work concentrated on the completion of troop quarters, building projects in 1954 will predominantly consist of supplementary work such as the construction of roads, supply depots, garages, service stations, hospitals, repair shops for tanks, guns, motor vehicles, etc., in addition to air raid installations which have so far been neglected. Construction work still concentrated on projects in the STRAUSBERG area which, after their scheduled completion in September 1954, will house KVP command agencies (Ministry for National Forces) and other KVP offices from East Berlin.

New KVP Installations

17. a. In December 1953, a new KVP supply depot was established and put into operation on Max Hesse Strasse and Steinfurter Strasse in FINOW. So far as could be determined, the depot chiefly stores motor vehicle and tank spare parts. Formerly, a Soviet motor vehicle repair shop was located on Max Hesse Strasse and a Soviet armory on Steinfurter Strasse.
- b. Information indicated that the Waldeslust ammunition depot near FINOW was vacated by the Soviets in February 1954. According to unsubstantiated reports, the installation will be taken over by the KVP.
- c. Unsubstantiated reports of February 1954 indicated that the southern sector of the BAD FREIENWALDE forest was made a restricted area by the KVP. It could not yet be determined to which purpose the KVP confiscated this area.

Transport Polizei (Transportation Police)

18. The Transport Polizei which is subordinate to the State Secretariate for State Security and which has so far consisted of 8 Inspektionen (inspectorates) and 38 Kreisaemter (district offices) has been reorganized into Abschnitte (sectors) and companies since January 1954. It now consists of 14 sectors which, depending on their missions, are assigned different numbers of companies. The introduction of military grades has been postponed. It remains to be seen whether the Transport Polizei will be merged with the KVP by June as was announced previously.

COUNTRY	Czechoslovakia	REPORT	
SUBJECT	Construction of a High-Tension Line near Roznov pod Radhostem	DATE DISTR.	3 June 1954
DATE OF INFO.		NO. OF PAGES	1
PLACE ACQUIRED		REQUIREMENT NO.	RD
		REFERENCES	

THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.
THE APPRAISAL OF CONTENT IS TENTATIVE.
(FOR KEY SEE REVERSE)

25X1 The construction of a high-tension line in the Roznov area (O 49/Q 96),
about 45 kilometers south-southwest of Moravska Ostrava (Maehrisch
25X1 Ostrau) (P 50/O 59) had already started in 1951. The power line led
25X1 from Roznov to Bystricka (P 50/O 44) and to Cesky Tesin (Q 50/O 88).
Between Bystricka and Roznov the pylons had been erected and about
20 mechanics worked in Roznov laying the cables. The power-transmission
line was allegedly part of a large network for the transmission, as
far as Hungary, of power produced in Poland.

25X1 Comment. It is believed that the project is part of the 200 kv
north-south power line which interconnects the Czech power net with
the Czech-Polish power plant at Oswiecim (Auschwitz) on the one hand
and with the Austrian power net on the other. In 1948, when the power
line was still being projected, some of the materials required were
already being ordered.
